A two-stroke engine is a type of internal combustion engine that completes a power cycle with two strokes of the piston during only one crankshaft revolution. This is in contrast to a "four-stroke engine", which requires four strokes of the piston to complete a power cycle during two crankshaft revolutions. In a two-stroke engine, the end of the combustion stroke and the beginning of the compression stroke happen simultaneously, with the intake and exhaust functions occurring at the same time. T

A 2 stroke spark ignition cycle or 2 stroke petrol engine differs from a 4 stroke petrol engine by the way it generates power in the number of revolutions of the crankshaft. Unlike in a 4 stroke petrol engine, the 2 stroke spark ignition cycle produces power in each of its revolutions. The 2 stroke spark ignition gives way to the traditional four strokes to run its complete cycle. Instead, it merges two strokes into one; thereby making one upward stroke and one downward stroke in every ...
