# Download Ebook Abdomen Assessment

The aorta is midline without bruit or visible pulsation. Umbilicus is midline without herniation.

The Skinny on Documenting an Abdominal Exam | ThriveAP

Assessing your patient's abdomen can provide critical information about his internal organs. Always follow this sequence: inspection, auscultation, percussion, and palpation. Changing the order of these assessment techniques could alter the frequency of bowel sounds and make your findings less accurate.

**Auscultation** of the abdomen should be performed prior to percussion and palpation, as physical manipulation of the abdomen may induce a change in bowel sounds. Purpose: to assess bowel sounds; Auscultate over all four quadrants. Listen for bruits. Normal findings: : gurgling bowel sounds every 5-10 sec; Percussion of the abdomen

## Abdominal examination - AMBOSS

When assessing the abdomen, inspection is often overlooked. Merely looking at the abdomen can tell you a great deal about the patient and their relative health. You should first look for symmetry to make sure there are no masses or protrusions that make one side of the abdomen bigger than the other.
