Sequences Answer

If the first term of
an arithmetic
sequence is a_1 and
the common
difference is d , then

Get Free Algebra 2

Arithmetic Sequences Answer Key
The n th term of the sequence is given by: $a_n = a_1 + (n-1)d$

An arithmetic series is the sum of an arithmetic sequence. We find the sum by adding the first, a_1 and last term, a_n , divide by 2 in order to get the mean of the two values and

Arithmetic Sequences and Series | Algebra 2 | Sequences ...

This sequence has a difference of 5 between each number. The values

Get Free Algebra 2

of a and d are: $a = 3$ (the first term) $d = 5$ (the "common difference") Using

the Arithmetic

Sequence rule: x_n

$$= a + d(n - 1) = 3$$

$$+ 5(n - 1) = 3 + 5n$$

$$- 5 = 5n - 2. \text{ So}$$

the 9th term is: x_9

$$= 5 \times 9 - 2 = 43.$$

Is that right? Check for yourself!
