Chapter 10 Cell Growth and Division Worksheet Answer Key ...

The cell cycle is the regular pattern of growth, DNA duplication, and cell division that occurs in eukaryotic cells.

FIGURE 5.1 shows its four main stages: gap 1, synthesis, gap 2, and mitosis. Gap 1,

Access PDF Cell Growth And

synthesis, and gap 2 together make up what is called interphase. The stages of the cell cycle get their names from early studies of cell division.

Division. In unicellular organisms, cell division is the means of reproduction; in multicellular organisms, it is the means of tissue growth and maintenance.

Survival of the eukaryotes depends upon interactions between many cell types, and it is

Access PDF Cell Growth And

essential that a balanced distribution of types be maintained. This is achieved by the highly regulated process of cell proliferation.
