Cornea and External Eye Disease (Essentials in Ophthalmology) eBook: Reinhard, Thomas, Larkin, Frank: Amazon.co.uk: Kindle Store

The 8 recurring volumes of the "Essentials in Ophthalmology" series cover the most recent developments in one of eight subspecialties in Ophthalmology. With four volumes published per year, each subspecialty is newly visited every 24 months, with a distinct focus on recent developments. By bridging the gap between original research and medical textbooks, the transfer of this developing knowledge into daily practice is greatly enhanced.

Are you looking for concise, practical answers to those questions that are often left unanswered by traditional references on cornea and external diseases? Are you seeking brief, evidence-based advice for the daily examination of patients? Curbside Consultation in Cornea and External Disease: 49 Clinical Questions provides quick and direct answers to the thorny questions most commonly posed during a "curbside consultation" between experienced clinicians. Dr. Frank Price Jr., joined by associate editors Dr. Marianne Price and Dr. Erik Letko, have designed this unique reference in which cornea and external disease specialists offer expert advice, preferences, and opinions on tough clinical questions commonly encountered by ophthalmologists, residents, and other health care professionals. The unique Q&A format provides quick access to current information related to cornea and external diseases with the simplicity of a conversation between two colleagues. Images, diagrams, and references are included to enhance the text and to illustrate clinical diagnoses and treatment plans. Curbside Consultation in Cornea and External Disease: 49 Clinical Questions provides information basic enough for residents while also incorporating expert pearls that even high-volume ophthalmologists will appreciate. Refractive surgeons, general ophthalmologists, and residents alike will enjoy the user-friendly and casual format. Some of the questions that are answered: \* A patient presents with corneal ulcer. What work-up and treatment would you recommend? o As answered by three different specialists in the USA, Europe, and India. \* What should I do for a patient who presents with 6-D astigmatism after undergoing penetrating keratoplasty 4 months ago? \* A 63-year-old male complaining of blurry vision has 360-degree peripheral corneal stromal thinning and conjunctivalization and moderate cataract in both eyes. Does he need surgery? \* A piece of glass flew into my patient's eye. The exam shows central corneal perforation \* A 67-year-old female complains of constant eye irritation. The exam shows conjunctivochalasis of the lower bulbar conjunctiva. Should I excise the redundant conjunctiva? \* I have a general ophthalmology practice in a remote area. When should I consider doing corneal cultures?"

The field of cornea has seen tremendous advances over the last 40 years—this uniquely comprehensive book will discuss the history of these advances, current best practices in important diseases of the cornea and ocular surface, and examine future directions in diagnosis and management. Written by leading experts, many of whom trained under Claes Henrik Dohlman, MD, PhD, whose influence and many invaluable contributions have defined and shaped the field of cornea, each chapter will reflect the state of the art in the various aspects of cornea. Foundations of Corneal Disease: Past, Present, and Future contains six different sections, opening with an introduction which delves into the evolution of subspecialty training in cornea, and provides a historical perspective of our understanding of

Ocular surface disease. Section Two addresses perspectives on important corneal and external diseases including infectious keratitis, dry eye, and herpes simplex. Section Three and Section Four address surgery and surgical alternatives, and frontiers in corneal research. Section Six closes this book with a discussion of special topics: imaging the cornea, corneal blindness, eye banking, and clinical trials in dry eye, and explores future directions in this fast-paced field. Foundations of Corneal Disease: Past, Present, and Future contains is an ideal guide for corneal specialists, ophthalmology residents and fellows planning to enter cornea, corneal scientists, and to those in ophthalmology and visual science interested in a comprehensive resource on cornea and the history of this field.

Ocular Surface Disease: Cornea, Conjunctiva and Tear Film incorporates current research and the latest management strategies as well as classification systems and treatment paradigms for all forms of ocular surface disease. This is the first comprehensive resource that helps you to meet ocular surface disease challenges effectively using today's best medical and surgical approaches. Get the complete, evidence-based guidance you need to provide optimal care for your patients with ocular surface disease. Implement the latest drug treatments and surgical interventions to provide better outcomes with fewer complications. Hone and expand your surgical skills by watching videos of leading experts performing advanced procedures including ocular surface transplantation techniques; amniotic membrane transplantation; pterygium surgery; lamellar keratoplasty (DALK) in ocular surface disease; and keratoprosthesis surgery. Visualize how to proceed by reviewing detailed, full-color images and consulting new classification systems and treatment paradigms for mild to severe forms of ocular surface disease. Take it with you anywhere! Access the full text, downloadable image library, video clips, and more online at [expertconsult.com](http://expertconsult.com).

Get an unprecedented view of corneal disease with Cornea Atlas by Jay H. Krachmer, MD and David A. Palay, MD. Hailed as the sharpest, most accurate collection of corneal images available, it is the only atlas that offers such an easy-to-understand, up-to-date review of clinical presentations and surgical techniques for all corneal and external eye disorders. Sharpen your diagnostic and surgical skills for all corneal and external eye disorders - including tumors, dystrophic and degenerative disorders, inflammatory diseases, corneal manifestations of systemic disease, traumatic injuries, and therapeutic and reconstructive surgical procedures. Rely on the expertise of internationally renowned ophthalmologists who have developed many innovative techniques for diagnosing and treating corneal and external eye diseases.

This comprehensive three-volume text covers every aspect of the cornea and external eye: basic science, examination and imaging, eye banking, diagnosis, and medical and surgical management. It is edited by three leaders in corneal disease. Computer enhanced images and artists' drawings supplement the text. Most complete and largest reference published on the cornea. Every aspect of the cornea is covered in this three volume, contributed text: basic science, medical, and surgical, plus practical overviews of eye banking and examination techniques Edited by three nationally renowned corneal specialists who are deemed to be leaders in the ophthalmic community. Computer enhanced illustrations throughout the text. Only reference on the cornea to have a corresponding full-color atlas and slides. Extensive sections on eye banking and corneal manifestations of systemic disease. Extensive up to date

reference lists accompany each chapter. Carefully reviewed and tightly edited by the editors Eye Diseases in Hot Climates, Second Edition provides information pertinent to the fundamental aspects of eye diseases in hot or tropical countries. This book examines the features of basic eye care, including careful planning, cost effectiveness, mobility, cooperation between various sciences, methods and resources, and an emphasis on prevention. Organized into 20 chapters, this edition begins with an overview of the various causes of eye diseases in hot, tropical, or developing countries. This text then examines the basic structure of the eye, which consists of three layers of tissue, namely, an outer protective layer, a middle layer of blood vessels, pigment cell and muscle fibers, and the retina. Other chapters consider the clinical methods needed to assess a patient with eye disease. This book discusses as well the various types of eye diseases, including, conjunctivitis, corneal ulcers, retinal degenerations, and vascular retinopathies. The final chapter deals with loss of vision. This book is a valuable resource for ophthalmologists.
