Draft Paper Aes Journals
The Journal of the Audio Engineering Society - the official publication of the AES - is the only peer-reviewed journal devoted exclusively to audio technology. Published 10 times each year, it is available to all AES members and subscribers. The Journal contains state-of-the-art technical papers and engineering reports; feature articles covering timely topics; pre and post reports of AES conventions and other society activities; news from AES sections around the world; Standards and ...

Journal of the Audio Engineering Society
The AES Journal seeks original unpublished research papers and engineering reports of archive quality on subjects related to the audio domain. All submissions will go through a peer review process to check their suitability for JAES. Manuscripts should describe original work unpublished elsewhere and not being considered for publication elsewhere.

"Directory of members" published as pt. 2 of Apr. 1954- issue

Many scientists and engineers consider themselves poor writers or find the writing process difficult. The good news is that you do not have to be a talented writer to produce a good scientific paper, but you do have to be a careful writer. In particular, writing for a peer-reviewed scientific or engineering journal requires learning and executing a specific formula for presenting scientific work. This book is all about teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables, abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.

This book constitutes the thoroughly refereed proceedings of the 8th International Conference on Entertainment Computing, ICEC 2009, held in Paris, France, in September 2009, under the auspices of IFIP. The 14 revised long papers, 19 short papers and 23 poster papers and demos presented were carefully reviewed and selected from 105 submissions for inclusion in the book. The papers cover all main domains of entertainment computing, from interactive music to games, taking a wide range of scientific domains from aesthetic to computer science.

Proceedings of the International Conference on Interdisciplinary Research in Electronics and Instrumentation Engineering 2015 (ICIREIE)

Computers at Risk presents a comprehensive agenda for developing nationwide policies and practices for computer security. Specific recommendations are provided for industry and for government agencies engaged in computer security activities. The volume also outlines problems and opportunities in computer security research, recommends ways to improve the research infrastructure, and suggests topics for investigators. The book explores the diversity of the field, the need to engineer countermeasures based on speculation of what experts think computer attackers may do next, why the technology community has failed to respond to the need for enhanced security systems, how innovators could be encouraged to bring more options to the marketplace, and balancing the importance of security against the right of privacy.

Proceedings of "River Basin Management: Canadian Experiences", a national symposium held in Kitchener, Ontario, October 4-7, 1981. Focuses on strategic issues associated with river basin management in Canada. Covers management problems, alternative solutions, implementing selected plans, and monitoring implemented activities.

This book constitutes the thoroughly refereed post-workshop proceedings of the 6th Annual International Workshop on Selected Areas in Cryptography, SAC'99, held in Kingston, Ontario, Canada in August 1999. The 17 revised full papers presented went through two rounds of reviewing and revision and were selected from 29 submissions. The papers are organized in sections on cryptosystems and pseudorandom number generators, security aspects of block cyphers, cryptanalysis of block cyphers, efficient implementations of cryptosystems, and cryptography for network applications.

In 1997, NIST initiated a process to select a symmetric-key encryption algorithm to be used to protect sensitive (unclass.) Fed. info. In 1998, NIST announced the acceptance of 15 candidate algorithms and requested the assistance of the cryptographic research community in analyzing the candidates. This analysis included an initial exam. of the security and efficiency characteristics for each algorithm. NIST reviewed the results of this research and selected MARS, RC, Rijndael, Serpent and Twofish as finalists. After further public analysis of the finalists, NIST has decided to propose Rijndael as the AES. The research results and rationale for this selection are documented here.
