Flash Guide Number Distance, Aperture and ISO. In order to understand how a flash guide number is calculated, you first have to understand... A Balanced Exposure. Ideally, you'd like to capture photos that look like #3 all the time - but this is sometimes... Flash Guide Number Formula. Before we dig ...

Flash Guide Number - The Digital SLR Guide

The flash guide number (GN) is a measure of the distance at which the flash can illuminate a subject. The higher the guide number, the greater the distance at which the light from the flash is sufficient for optimal exposure. The formula for calculating the guide number is as follows: Guide number (GN)=distance (meters) x aperture (f-number)

Flash Level (Guide Number) - Nikon | Imaging Products

Guide Number is a solution to deal with the Inverse Square Law. Flash intensity falls off with distance. Guide Number (GN) is a numerical method used to determine exposure of direct flash for Manual flash power levels, to automatically deal with the Inverse Square Law, making the math be trivial.

Understanding Camera Flash Guide Numbers, plus GN Calculator

Tutorial: How to use the guide number of your flash. GN = distance \* f-stop. Your flash 's Guide Number (GN) is determined at 100 ISO, when it gives correct exposure at a certain distance, multiplied by the f-stop

Tutorial: How to use the guide number of your flash - Tangents

In short, guide numbers on a flash indicate how much light that flash can produce. You ' ll see them in the specs indicated in either meters or feet. The higher the guide number the further the flash will reach. The specifications will also show the flash settings at which the guide number is calculated, including the ISO and flash zoom setting.

Guide Numbers Explained for Manual Flash - Calculator ...

A flash 's power is determined by its Guide Number, with low Guide Numbers (GN) indicating a weak or less powerful flash than one with a high GN. For ease of comparison, most flash GNs are rated for an ISO 100 film. If you use a film with a lower ISO the GN will be lower, and, conversely, if you use a higher speed film the GN will be higher.

Flash Photography - Understanding Guide Numbers

Guide Number simply is the multiplied product of (flash distance x f/stop) for a proper exposure situation (normally specified for ISO 100). For example, if a certain Guide Number were equal to 100 (feet), then it says a correct direct flash exposure is 1/20 at 5 feet, or 1/5 at 20 feet, or 1/10 at 10 feet, etc.

Compare Power Rating of Camera Flashes with Guide Numbers

GN = Subject Distance from Flash Source x f/Stop. Guide numbers are based on a simple mathematical equation that states: the light output of an electronic flash is equal to the distance of the flash unit from the subject multiplied by the lens aperture, or f/stop.

Understanding Guide Numbers | B&H Explora

Specifically, a flash unit 's guide number indicates how much light the unit will emit in relation to a standard film speed. The higher the guide number, the more powerful the flash. This number is usually indicated in the owner's manual of the flash. It 's represented as "GN 118 with ISO 100 film."

Demystifying Flash Guide Numbers - Vivid

The effective range – and therefore the guide number – of any flash will be affected by the use of diffusers, soft boxes, or any other type of flash modifier, as well as whether the flash head is zoomed out or not. Also, remember that guide numbers are usually calculated based on a full-frame (35mm equivalent) sensor.

Making Sense of Your Flash's Guide Number - DIY Photography

real guide number = aperture \* distance between flash and image subject The effective guide number can be different depending on factors like the subject's light reflection or alternate flash usage ways like indirect flashing or flash reflector adjustment. Modern all-automatic cameras don't let the users worry about all that stuff.
