

International Perspectives On Teaching And Learning With Gis In Secondary Schools

Right here, we have countless book **international perspectives on teaching and learning with gis in secondary schools** and collections to check out. We additionally manage to pay for variant types and then type of the books to browse. The adequate book, fiction, history, novel, scientific research, as competently as various further sorts of books are readily easily reached here.

As this international perspectives on teaching and learning with gis in secondary schools, it ends going on brute one of the favored books international perspectives on teaching and learning with gis in secondary schools collections that we have. This is why you remain in the best website to look the amazing ebook to have.

This book explores terminology, frameworks, and research being conducted worldwide on virtual manipulatives. It brings together international authors who provide their perspectives on virtual manipulatives in research and teaching. By defining terminology, explaining conceptual and theoretical frameworks, and reporting research, the authors provide a comprehensive foundation on the study and use of virtual manipulatives for mathematics teaching and learning.

Efforts to reduce discrimination and increase diversity on campuses, coupled with shrinking budgets causing administrators to devote more resources toward recruiting and retaining students with disabilities, are fuelling an explosion of research in the area of inclusive education. An important focus that has been largely neglected is the place of teachers with disabilities in academe. International Perspectives on Teaching with Disability brings together 25 multi-disciplinary scholars with disabilities from Africa, Canada, the Caribbean, the UK, Israel and the United States to share their struggles and successes in teaching with disability. The 18 chapters are written largely from autoethnographic perspectives grounded in solid academic research but full of anecdotes and self-reflexive narratives that provide insights into the lived experiences of the authors. Woven into the narratives are discussions of the complexities of self-disclosure and self-advocacy; the varied—and often problematic—ways disability is experienced, perceived and discussed in society and in the classroom; the challenges of navigating academe with disability, the value of disability pedagogy, the positive student outcomes achieved by teaching through disability, as well as practical applications and lessons learned that will benefit educators, administrators and students preparing to become teachers. This book is written to champion the integral place and role of disabled educators in academe. Current educators with disability will be affirmed. Those with disability aspiring to become teachers will be encouraged. Temporarily able-bodied administrators and educators will be challenged. Everyone will be informed. This book will be a welcome addition to reading lists in a wide array of academic fields including: Education, Pedagogy, Disability Studies, Human Resources Management, and Sociology.

The renowned and highly experienced editors of this book bring together the leading voices in contemporary English education under the banner of the International Federation for the Teaching of English (IFTE). The collected chapters here represent the very best of international writing on the teaching of English in the past decade. The key issues and debates surrounding English teaching across the globe are discussed and analysed accessibly, and

incorporate wide-ranging topics including: • The impact of high stakes testing on teaching and learning; • Addressing the needs of minority groups; • The digitization of literature and new conceptions of text; • Rewriting the canon; • Dealing with curriculum change; • "Best practices" in the teaching of English; • The tension between 'literacy' and 'English'; • English and bilingual education; • The impact of digital technologies on teaching and learning; • Conceptions of English as a subject [secondary and tertiary]; • Bringing the critical into the English/Literacy classroom; • The future of subject English; • Empowering voices on the margins; • Pre-service teacher education; • The social networking English classroom. This text looks at the changing face of subject English from the differing perspectives of policy makers, teacher educators, teachers and their students. It tackles some of the hard questions posed by technological advances in a global society, challenges conventional approaches to teaching and points to the emerging possibilities for a traditional school subject such as English in the face of rapid change and increasing societal expectations. Despite all of the converging political and technological threats, the authors of this engaging and insightful text portray an immense confidence in the ultimate worth of teaching and learning subject English.

This, the first publication to collate a broad international perspective on the pedagogical value of GIS technology in classrooms, offers an unprecedented range of expert views on the subject. Geographic Information Systems (GISs) are now ubiquitous and relatively inexpensive. They have revolutionized the way people explore and understand the world around them. The capability they confer allows us to capture, manage, analyze, and display geographic data in ways that were undreamt of a generation ago. GIS has enabled users to make decisions and solve problems as diverse as designing bus routes, locating new businesses, responding to emergencies, and researching climate change. GIS is also having a major impact in the classroom. Students and teachers around the world are using this significant emerging technology in the secondary school classroom to study social and scientific concepts and processes, to broaden their technical skills, and to engage in problem solving and decision making about local and global issues. *International Perspectives on Teaching and Learning with GIS in Secondary Schools* brings together authors from 34 countries who profile the current status of GIS in secondary school teaching and learning in their country. Each chapter includes a summary of the country's educational context, a case study illustrating how GIS is used in secondary schooling, and an assessment of the opportunities and challenges in teaching and learning with GIS now and in the future. The book demonstrates that GIS is not only a technological tool to be used in the classroom, but also a catalyst for motivation, encouragement, and cooperation in understanding and solving global problems. The most up to date and extensive survey of GIS in the secondary education landscape, covering both principles and practice. Professor David Maguire, Pro-Vice-Chancellor, Birmingham City University, UK *International Perspectives on Teaching and Learning With GIS in Secondary Schools* is a highly relevant, critically important, reflective contribution to the literature, providing strong arguments supporting the inclusion for spatial studies for all in secondary school education. Karl Donert, President, EUROGEO This is an invaluable and inspirational examination of innovation in geospatial technologies in secondary schools around the world. Each chapter contains practical models for how to integrate powerful tools for spatial analysis into a range of subjects. It will be useful to classroom teachers and administrators seeking pathways to implementation and teacher educators considering how to prepare the next generation to use geospatial technologies. Sarah Witham Bednarz, Department of Geography, Texas A&M University, College Station, TX, USA

This book offers a holistic practitioner and research-based perspective on English Language Teaching and teacher education in difficult circumstances. In addition to extending the current conceptualization of 'difficult circumstances' in ELT to include the broader policy issues that may affect ELT in low-to-mid income countries, the book focuses on the challenges faced by practitioners and learners in contexts of confinement, conflict and special education. The chapters in this collection examine the challenges and problems that emerge from the complex current ELT environment, and present examples of

contextualized inquiry-based strategies and interventions to address these challenges. Underlining the need to extend the boundaries of the discipline of ELT to include teaching-learning in less privileged contexts, this wide-ranging volume will appeal to students, scholars and practitioners of English Language Teaching.

There has been an explosion of interest in teaching excellence in higher education. Once labelled the 'poor relation' of the research/teaching divide, teaching is now firmly on the policy agenda; pressure on institutions to improve the quality of teaching has never been greater and significant funding seeks to promote teaching excellence in higher education institutions. This book constitutes the first serious scrutiny of how and why it should be achieved. International perspectives from educational researchers, award winning teachers, practitioners and educational developers consider key topics, including: policy initiatives research-led teaching excellence and scholarship the significance of academic disciplines research into teaching excellence rewarding through promotion inclusive learning and ICT. Teaching Excellence in Higher Education provides a guide for all those supporting, promoting and trying to achieve teaching excellence in higher education and sets the scene for teaching excellence as a field for serious investigation and critical enquiry.

This book explores teacher well-being in light of the increasingly ethnically diverse profiles of schools and classrooms, focusing on socially and linguistically diverse teaching contexts. It draws attention to the socio-economic disadvantages that can often be characteristic of ethnically diverse classrooms, prior to examining and reviewing the interconnections between teacher well-being and the implementation of pedagogical processes in the classroom teaching and learning context. Teachers and academics alike report on and address the well-being-related needs of practising teachers. This book contributes to the emerging field of literature on teacher well-being and offers international perspectives on lessons learnt in socially diverse and multilingual teaching contexts. Accordingly, it offers a valuable resource for teacher educators, researchers, pre-service and in-service teachers, and policymakers.

This book is the latest volume in the Research on Stress and Coping in Education series. The authors present original research and current theory regarding the realities of coping with the stresses of teaching. The chapters highlight working conditions for teachers around the globe and the processes and strategies that teachers use to survive and thrive in their daily work with students, families, and educational administrators. Both stress researchers and educational policy makers will find the chapters offer insights into sources of stress for teachers, strategies for stress prevention and coping, and the negative consequences that stress can have on teacher retention. Researchers from Norway, Turkey, Greece, the United States, the Netherlands, Germany, Russia, Italy, and China illustrate through a variety of research methods both the centrality of cultural context and the commonalities of teacher experiences around the world.

This volume documents on-going research and theorising in the sub-field of mathematics education devoted to the teaching and learning of mathematical modelling and applications. Mathematical modelling provides a way of conceiving and resolving problems in the life world of people whether these range from the everyday individual numeracy level to sophisticated new problems for society at large. Mathematical modelling and real world applications are considered as having potential for multi-disciplinary work that involves knowledge from a variety of communities of practice such as those in different workplaces (e.g., those of educators, designers, construction engineers, museum curators) and in different fields of academic endeavour (e.g., history,

archaeology, mathematics, economics). From an educational perspective, researching the development of competency in real world modelling involves research situated in crossing the boundaries between being a student engaged in modelling or mathematical application to real word tasks in the classroom, being a teacher of mathematical modelling (in or outside the classroom or bridging both), and being a modeller of the world outside the classroom. This is the focus of many of the authors of the chapters in this book. All authors of this volume are members of the International Community of Teachers of Mathematical Modelling (ICTMA), the peak research body into researching the teaching and learning of mathematical modelling at all levels of education from the early years to tertiary education as well as in the workplace.

International Perspectives on Education is intended for those with an interest in education as an academic area, including students of Education Studies and MA Education. It is also suitable for those who have an interest in applied theory, including those involved in or training for the teaching profession; and to those who are concerned with the management and governance of education: those who formulate policy, those charged with inspecting or advising the profession, and those (such as head teachers or school governors) whose task is to guide others.

Literature teaching remains central to the teaching of English around the world. This edited text brings together expert global figures under the banner of the International Federation for the Teaching of English (IFTE). The book captures a state-of-the-art snapshot of leading trends in current literature teaching, as well as detailing predicted trends for the future. The expert scholar and leading teacher contributors, coming from a wide range of countries with fascinatingly diverse approaches to literature teaching, cover a range of central and fundamental topics: literature and diversity; digital literatures; pedagogy and reader response; mother tongues; the business of reading; publishers, adolescent fiction and censorship; assessing responses to literature; the changing definitions of literature and multimodal texts. The collection reviews the consistently important place of literature in the education of young people and provides international evidence of its enduring value and contribution to education, resisting the functionalist and narrowly nationalist perspectives of misguided government authorities. International Perspectives on the Teaching of Literature in Schools will be of value to researchers, PhD students, literature scholars, practitioners, teacher educators, teachers and all those in the extensive academic community interested in English and literacy around the world.
