Mechanical power is the product of force and velocity so $P = Fv$ (Watts). In this case we have one force pulling in opposition to the other so the net power transmitted is $P = v(F_1 - F_2)$ Since $v = ND$ $P = ND(F_1 - F_2)$ Another way to look at this follows. Torque = Force x Radius and since radius is half the diameter $T = F \times D/2$

learning experience for the study of motor development across the life span. The seventh edition expands the tradition of making the student's experience with motor development an interactive one. An improved web study guide retains more than 100 video clips to sharpen observation techniques, while incorporating additional interactive questions and lab activities to facilitate critical thinking and hands-on application. The text also contains several updates to keep pace with the changing field: Content related to physical growth and development of the skeletal, muscle, and adipose systems is reorganized chronologically for a more logical progression. New material on developmental motor learning demonstrates the overlap between the disciplines of motor development and motor learning. New insights into motor competence help explain the relationship between skill development and physical fitness. The text helps students understand how maturational age and chronological age are distinct and how functional constraints affect motor skill development and learning. It shows how the four components of physical fitness—cardiorespiratory endurance, strength, flexibility, and body composition—interact to affect a person's movements over the life span, and describes how relevant social, cultural, psychosocial, and cognitive influences can affect a person's movements. This edition comes with 148 illustrations, 60 photos, and 25 tables—all in full color—to help explain concepts and to make the text more engaging for students. It also retains helpful learning aids including chapter objectives, a running glossary, key points, sidebars, and application questions throughout each chapter. The enhancements to the seventh edition don't end with revised content in the text. Instructors adopting the text for use in their course will find an updated ancillary package. The authors have revised the test package, and the instructor guide now includes feedback and answers to lab questions and "Test Your Knowledge" questions that appear throughout the book. In addition, the video clips that students view through the web study guide are available in separate
