The world is witnessing a rapid rise in the number of victims of human trafficking and of migrants—voluntary and involuntary, internal and international, authorized and unauthorized. In the first two decades of this century alone, more than 65 million people have been forced to escape home into the unknown. The slow-motion disintegration of failing states with feeble institutions, war and terror, demographic imbalances, unchecked climate change, and cataclysmic environmental disruptions have contributed to the catastrophic migrations that are placing millions of human beings at grave risk. Humanitarianism and Mass Migration fills a scholarly gap by examining the uncharted contours of mass migration. Exceptionally curated, it contains contributions from Jacqueline Bhabha, Richard Mollica, Irina Bokova, Pedro Noguera, Hirokazu Yoshikawa, James A. Banks, Mary Waters, and many others. The volume ' s interdisciplinary and comparative approach showcases new research that reveals how current structures of health, mental health, and education are anachronistic and out of touch with the new cartographies of mass migrations. Envisioning a hopeful and realistic future, this book provides clear and concrete recommendations for what must be done to mine the inherent agency, cultural resources, resilience, and capacity for self-healing that will help forcefully displaced populations.

Next Generation Science Standards identifies the science all K-12 students should know. These new standards are based on the National Research Council's A Framework for K-12 Science Education. The National Research Council, the National Science Teachers Association, the American Association for the Advancement of Science, and Achieve have partnered to create standards through a collaborative state-led process. The standards are rich in content and practice and arranged in a coherent manner across disciplines and grades to provide all students an internationally benchmarked science education. The print version of Next Generation Science Standards complements the nextgenscience.org website and: Provides an authoritative offline reference to the standards when creating lesson plans Arranged by grade level and by core discipline, making information quick and easy to find Printed in full color with a lay-flat spiral binding Allows for bookmarking, highlighting, and annotating

Virtually every national standards document, every state framework, and every local set of standards calls for fundamental changes in what and how teachers teach. The challenge for teachers is to implement the vision for mathematics and science classrooms called for in the standards. This issue describes that vision and suggests ways to use the standards mandated in your school to improve your practice--to help you teach in your standards-based classroom.

This book reflects on science education in the first 20 years of the 21st century in order to promote academic dialogue on science education from various standpoints, and highlights emergent new issues, such as education in science education research. It also defines new research agendas that should be “ moved forward ” and inform new trajectories through the rest of the century. Featuring 21 thematically grouped chapters, it includes award-winning papers and other significant papers that address the theme of the 2018 International Science Education Conference.
