In this book, Henry Idema has developed a theory of religion and culture indebted to the psychological work of Sigmund Freud and the sociological work of Weinstein and Platt, and he has shown the validity of his theory through illustrations from the life and times and work of Sherwood Anderson, Ernest Hemingway, and F.Scott Fitzgerald. Idema brings a psychoanalytic perspective to his analysis of religion and culture. He starts out by developing a theory of religion focusing on early relationships with the mother and father, and then shows how social forces such as urbanization, industrialization etc. weakened religion in the institutional church, especially in its function of helping men and women to cope with anxiety.

Everything about Angela "Big Ang" Raiola is larger than life: her lips, her 36JJ breasts, and especially her personality! In a lifestyle guide as genuine and fun as Big Ang herself, the star of VH1's Mob Wives, called the show's "den mother" by the New York Times, serves up the hilarious and poignant wisdom she's learned while running her bar, raising her family, and dating made men. Big Ang has rules to live by for beauty, food, family, friendship, and more. Here she is... ON HER KILLER BOOBS: I was on vacation with my family in the Catskills when out of nowhere, this bat flies right into my chest and then falls splat on the ground. Turned out, he died on impact. ON FAMILY TRADITIONS: Every Sunday, we do a feast for fifteen to twenty-five people. Last week, we went through seventy-five meatballs. Even by my family's standards, that's a lot of balls. ON DIETING: Swearing off lasagna to lose weight? You might fit into smaller jeans. But you're still the same person- except hungrier and bitchier. ON HOBBIES: Would I rather cook for people or have sex? No hard-and-fast rule there. But I will say this: Cooking is always satisfying.

Printers nowadays are having to learn new technologies if they are to remain competitive. This innovative, practical manual is specifically designed to cater to these training demands. Written by an expert in the field, the Handbook is unique in covering the entire spectrum of modern print media production. Despite its comprehensive treatment, it remains an easy-to-use, single-volume reference, with all the information clearly structured and readily retrievable. The author covers both traditional as well as computer-aided technologies in all stages of production, as well as electronic media and multimedia. He also deals with training, research, strategies and trends, showing readers how to implement the latest methods. With 1,200 pages, containing 1,500 illustrations - over half in colour - the Handbook conveys the current state of technology together with its specific terminology. The accompanying CD-ROM includes the entire manual in fully searchable form, plus additional software tools. Invaluable information for both beginners and "old hands" in printing works, publishing houses, trade associations, the graphics industry, and their suppliers.

This unique new book is a comprehensive review of the many current industrial applications of particle accelerators, written by experts in each of these fields. Readers will gain a broad understanding of the principles of these applications, the extent to which they are employed, and the accelerator technology utilized. The book also serves as a thorough introduction to these fields for non-experts and laymen. Due to the increased interest in industrial applications, there is a growing interest among accelerator physicists and many other scientists worldwide in understanding how accelerators are used in various applications. The government agencies that fund scientific research with accelerators are also seeking more information on the many commercial applications that have been or can be developed with the technology developments they are funding. Many industries are also doing more research on how they can improve their products or processes using particle beams Contents: Introduction to the Beam Business (Robert W Hamm and Marianne E Hamm)Ion Implantation for Fabrication of Semiconductor Devices and Materials (Michael I Current)Electron Beam Materials Processing (Donald E Powers)Electron Beam Materials Irradiators (Marshall R Cleland)Accelerator Production of Radionuclides (David J Schlyer and Thomas J Ruth)Industrial Aspects of Ion Beam Analysis (Ragnar Hellborg and Harry J Whitlow)Production and Applications of Neutrons Using Particle Accelerators (David L Chichester)Nondestructive Testing and Inspection Using Electron Linacs (William A Reed)Industrial Use of Synchrotron Radiation: Love at Second Sight (Josef Hormes and Jeffrey Warner) Readership: Physicists, engineers and practitioners in accelerator technology and applications.

Why this book? Other than the fact that I like writing about computers more than just about anything else, this book fills several real needs. No matter how many manuals a computer manufacturer puts out to accompany a syste- and some of Epson America's are very good - not everything can be covered. This book fills in the gaps. This book is unbiased, having been written independently of Epson. So, I won't be telling you to drop everything and run out to buy an HX-20. The HX- 20 is good for some uses, not so good for some others. This book is a guide to out of the machine and/or pointing you towards a different getting the most machine that might better suit your needs. At the start of this project I had to decide who was my target audience: novices, experts, or those in between? Because HX-20 owners and prospective owners don't fall into neat categories, I tried to 'cover all the bases'. Or at least as many as possible. As with any attempt to do everything, I didn't always succeed. But I did succeed in providing at least something for everyone. For those who haven't yet bought a portable - or are unsure if buying an HX-20 was the right move - there are descriptions of 20 other portables on the market. For those who have used other computers before, there's information on how Epson BASIC differs from other BASICS, with tips on converting programs.
