Signals exist naturally and are also created by people. Some operate continuously (known as continuous-time signals); others are active at specific instants of time (and are called discrete-time signals).

Continuous-time signal is

the "function of continuous-

time variable that has

uncountable or infinite set

of numbers in its sequence".

The continuous-time signal

can be represented and

defined at any instant of

the time in its sequence.

The continuous-time signal is also termed as analog signal.

~~Definition of Continuous And Discrete Signals | Chegg.com~~

Continuous systems are those types of systems in which input and output signals are the same at both the ends.

In this type of system, variable changes with time and any type of variation is not found in the input and output signal. In response to the input signal, a continuous system generates an output signal.
