From the Publishers Weekly review: "Two experts from Yale tackle the business wake-up-call du jour-environmental responsibility-from every angle in this thorough, earnest guidebook: pragmatically, passionately, financially and historically. Though "no company the authors know of is on a truly long-term sustainable course," Esty and Winston label the forward-thinking, green-friendly (or at least green-acquainted) companies WaveMakers and set out to assess honestly their path toward environmental responsibility, and its impact on a company's bottom line, customers, suppliers and reputation. Following the evolution of business attitudes toward environmental concerns, Esty and Winston

offer a series of fascinating plays by corporations such as Wal-Mart, GE and Chiquita (Banana), the bad guys who made good, and the good guys-watchdogs and industry associations, mostly-working behind the scenes. A vast number of topics huddle beneath the umbrella of threats to the earth, and many get a thorough analysis here: from global warming to electronic waste "take-back" legislation to subsidizing sustainable seafood. For the responsible business leader, this volume provides plenty of (organic) food for thought. "

In her bestselling books Blue Gold and Blue Covenant, world-renowned water activist Maude Barlow exposed the battle for ownership of our dwindling water supply and the emergence of an international, grassroots-led movement to reclaim water as a public good. Since then, the United Nations has recognized access to water as a basic human right—but there is still much work to be done to stem this growing crisis. In this major new book, Barlow draws on her extensive experience and insight to lay out a set of key principles that show the way forward to what she calls a “ water-secure and water-just world. ” Not only does she reveal the powerful players even now impeding the recognition of the human right to water, she argues that water must not become a commodity to be bought and sold on the open market. Focusing on solutions, she includes stories of struggle and resistance from marginalized communities, as well as government policies that work for both people and the planet. At a time when climate change has moved to the top of the national agenda and when the stage is being set for unprecedented drought, mass starvation, and the migration of millions of refugees in search of water, Blue Future is an urgent call to preserve our most valuable resource for generations to come.

This text brings together scholarship on the history of psychology and race. Throughout the history of the field, psychological discourse has been shaped by social concerns, and its discourse on race is no exception. Psychologists have promoted and fought against racism and a nuanced historical account requires analysis of both dimensions. The contributors seek to understand the relationship between the changes in the field and broader social change by mapping the changing discourse for defining difference through race. ideas of race in the work of 19th-century and 20th-century psychologists; psychological discourse on topics such as mixed-race people; political uses of racial research; changes in textbook presentations of race and intelligence; and international perspectives on psychology and race. The contributors also examine the prominence and persistence of American research on racial differences in intelligence as well as the work of Kenneth Clark and Horace Mann Bond in combatting racism in science and society. This volume aims to increase readers' understanding of the link between racial studies and social attitudes in our time, and aims to provide a comprehensive examination of that link through history.
