### WebSphere Application Server V7:

#### Administration with Scripting

Abstract. This IBM® Redbooks®

publication provides system administrators and developers with the knowledge to configure a WebSphere® Application Server V7 runtime environment, to package and deploy applications, and to perform ongoing management of the WebSphere environment. As one in a series of IBM Redbooks publications and Redpapers™ publications for V7, the entire series is designed to give you in-depth information about key WebSphere Application Server features.

enable two new administrative topologies. An administrative agent profile acts as a dedicated management server. In this environment, the administrative workload is shifted from each individual application server to the administrative agent server, thereby reducing the administrative overhead and making administrative tasks easier.

### System administration for WebSphere Application Server V7 ...

At a minimum, you need a job manager to queue up jobs, and an administrative agent with at least one registered node or a deployment manager cell. For this exercise, you must have WebSphere Application Server V7.0 installed on two systems, which will be referred to here as
